

SSE GREEN SUPPLY CHAIN

HELPING YOUR SUPPLY CHAIN GO GREEN

The next stage in your carbon reduction plan

Moving your carbon output ever closer to zero is integral to your successful business growth – and the impact your company has on the world around you.

To help you scale up your carbon-reduction progress, our new Green Supply Chain solution lets you take your suppliers and partners on the journey to net zero with you.

The innovative Green Supply Chain solution passes on your 100% renewable SSE Green Electricity preferential rate to your supply chain. Helping to improve your supply chain's sustainability, it also contributes towards reducing your Scope 3 emissions as per the Greenhouse Gas Protocol (GHGP).

WHAT ARE THE BENEFITS?

We all have a role to play in achieving net zero. For large companies a substantial part of your emissions can come from your supply chain – or Scope 3 emissions. But your scale also offers a solution.

Leveraging your size, you can now help your suppliers and partners by giving them access to our SSE Green Electricity at the same preferential rate as you enjoy. Making low carbon renewable energy accessible to all; and reducing your Scope 3 emissions.

NOT JUST ANY ENERGY

Naturally, like you, when your supply chain choose SSE Green Electricity, they benefit from traceable, renewable energy. This is certified, 100% renewable electricity from SSE, generated exclusively from our own Wind and Hydro assets. It's backed by Renewable Energy Guarantees of Origin (REGOs), and independently verified by EcoAct, an Atos company and CDP accredited provider.

ACHIEVING SCOPE 3 TARGETS

Your supply chain emissions, part of the Scope 3 category, can feel hard to manage as it's outside of your direct control. That's where SSE Green Supply Chain comes in, enabling you to pass on your preferential rate to your suppliers and in turn reducing your Scope 3 emissions – showing shareholders and investors your leadership and commitment to a net zero future.

PARTNERING WITH SSE

When you choose to partner with SSE Energy Solutions, you're working with a company who's fully committed to creating a better world of energy for tomorrow.

SSE's own carbon reduction goals are underpinned by Science Based Targets that help track our progress. This experience helps us to understand the journey you're on, and how you can achieve your targets too.

Telefonica

We helped Telefonica UK – the first customer to sign up for SSE Green Supply Chain – to put into action plans to cut carbon emissions from its entire business and network by 2025, whilst working with their supply chain partners to reduce emissions by 30% in the next five years.

FOR A BETTER WORLD OF ENERGY
